

## PAI-700 Vertical Card magnetic Compass

The most obvious advantage of the PAI-700 vertical card magnetic compass is the easy to steer by presentation! With a glance at the aero design lubber line on the lens, you see the complete 360° dial in proper relation to your aircraft heading, or the reciprocal thereof, presented the way you think. The PAI-700 utilizes eddy current damping, no fluid. Overswing is minimized or eliminated. 5V, 14V, or 28V light assemblies are furnished.

Manufactured exclusively by Precision Aviation Administration citing FAR-21 and TSO C7c Type 1.
