Jack and Connector Mount

AVB25

The AVB25 is designed to provide a cover for the removal of ash tray assemblies while providing a universal bracket for a broad range of installation applications including headphone & microphone jacks as well as RS-232 connectors to facilitate the use of lap-top computers and moving maps. The AVB25 directly replaces ashtrays on most Piper, Mooney, Cessna, Rockwell, and certain Beech aircraft. This universal mount is constructed of General Electric Valox 310SE0 Resin and can meet FAR 25.853 while providing dielectric strength and resistivity for RFI sensitive data and communication connections. Pre-located hole positions are identified for use of existing ashtray brackets.

The mount is easily machined with common metal working tools and is dimensionally stable in high heat conditions. The AVB25 comes in flat black finish and can be painted to match interior colors.
